

PRESS RELEASE

Progress Update – Artificial Intelligence at LUNDI MATIN, 2 Years Later: 3 Major Achievements

Montpellier, July 3, 2025

Two years ago, **LUNDI MATIN** announced an ambitious €5 million investment plan in Artificial Intelligence. Today, the company reaches a new milestone with three concrete results that embody its vision: making AI a strategic lever for software innovation, training, and business transformation.

AI Integrated at the Core of LUNDI MATIN Solutions

The R&D team has designed and integrated proprietary AI technology into its LMB technology platform, which supports its software offerings (ERP, POS, restaurant, e-commerce).

This AI automates maintenance, accelerates development, and optimizes the user experience across our solutions.

Development teams gain responsiveness, improved delivery quality, and continuous innovation capacity.

“Our AI handles tasks previously assigned to our developers. It autonomously fixes bugs, suggests intelligent refactoring, and generates reliable code from business specifications.”

Alexandre HELIES,
CTO of LUNDI MATIN

An Internal Initiative to Democratize AI Across Teams

Convinced that AI should not be limited to experts, LUNDI MATIN launched a proactive initiative to spread AI usage across all teams: tech, support, marketing, HR...

Internal training sessions, accessible tools (internal AI assistants, no-code AI interfaces), and cross-functional projects enabled rapid and measurable adoption.

“AI has become a reflex in our daily processes. It supports creativity and enhances the impact of every employee.”

Gaëlle CHALANDE,
Co-founder of LUNDI MATIN

Acquisition of the IT School Diginamic and Creation of AI Training Programs

As part of its strategy, LUNDI MATIN acquired Diginamic, a recognized IT school, to launch new specialized training courses in Artificial Intelligence.

These programs aim to address the real challenges of AI applied to business, far from trends, with a very pragmatic approach.

“Training tomorrow’s talents guarantees broad and sovereign AI adoption within French companies.”

Benjamin CHALANDE,
President of LUNDI MATIN

Upcoming Recruitment: AI Project Managers and AI Developers

To support this acceleration, LUNDI MATIN is opening positions for AI project managers and AI developers to accompany the technological transformation of its solutions and the scaling up of client AI projects.

About LUNDI MATIN

Founded in 2007 in Montpellier, LUNDI MATIN designs management software (ERP, POS, restaurant, e-commerce) used by over 7,000 companies in France and internationally. The company has experienced rapid growth driven by its technological approach, product culture, and commitment to AI.
